### **5 Steps to Take After a HIPAA Data Breach**

It's essential to take the steps necessary to prepare against a data breach, but after one does occur, knowing how to respond can make all the difference.

#### **1. Widen your response team**

Your incident response group may have been doing the initial investigation as a small team, but now you have a breach and you may have to include a broader set of people in the organization.

Those people could include internal resources, but also outside resources who can help begin the process of notifications and assessing who needs to be notified and how.

#### **2. Determine who to notify and how**

Another component of the overall response plan is to determine who needs to be notified and how to go about doing it. There may have been population data sets whose records have been compromised and they may not have been homogeneous.

For example, some patients can be minors and others deceased. There are special considerations you have to take when it comes to healthcare, such as how employees will be expected to deal with patients when explaining the situation to them.

## TELEMENTAL HEALTH INSTITUTE

### How Do You Maintain Compliance With Telehealth?

It's the first question that pops up whenever discussing telehealth or telepsychiatry: "Is that HIPAA compliant?"

[Get the scoop...](#)

### Using EHR for Quality Management and Compliance

If properly designed, implemented, and used, your EHR can be much more than a tool for collecting and storing health records for the individuals served by your organization. [See how....](#)

### How Does PIMSY Work for Admin?

Join Adam Lowell for a lunch + learn webinar showing how PIMSY streamlines client intake, check-in and management:

**Thurs, 6.23, 12-12:45 PM EST: space is limited, [click here](#) to register.**

To your success!
