Applied Behavior Analysis

What is Applied Behavior Analysis

Applied Behavior Analysis (ABA) is the science of understanding, predicting and controlling human behavior and how it is affected by environment. ABA-based interventions are best recognized for treating individuals with developmental disabilities such as [autism spectrum disorders](#); however, it can be used to address a wide variety of needs, such as education, wellbeing and exercise, acquisition of language, severe mental disorders and parenting. designed, controlled studies," it was their opinion that an ABA-based approach is "well-established" for improving the intellectual performance of young children with ASD. As the number of children with ASDs continues to increase, ABA interventions may become even more important for the health and wellbeing of society in the future.

Can PIMSY be used for ABA?

YES

PIMSY is not only for mental & behavioral health, but can absolutely be used for Applied Behavior Analysis (ABA) treatment as well. When we joined forces with an ABA treatment provider at the end of the year, our new client requested additional functionality for their needs. Now, PIMSY offers a powerful [Q&A graphing module](#) that easily tracks clients' behavior over time.

If you're currently using Excel to manage clients and treatments, PIMSY can effortlessly integrate your Excel graphs into the progress and assessment notes. And, with its new custom reporting module, PIMSY can easily accommodate any reporting requirements you may have for state, local and federal agencies.

If you've been using a EMR system you're not happy with or are still on paper notes, [contact us](#) to schedule a demo of PIMSY.
